

## Nature's Reward Mission Statement

"To ensure the integrity of Hemp derived CBD by providing education, consultation and high quality CBD products that meet the needs of our local community."

We have been fighting for the cannabis/hemp plant to be legally recognized as a source of medicine, fuel, fiber and more for over 28 years.

With CBD now legal in all 50 states, seeing bogus CBD products in local gas stations and convenient stores is exactly what our movement feared.

Low grade CBD products sold by "hit and run" companies does not build trust in folks that are considering CBD as a wellness solution.

We offer help for individuals seeking a CBD wellness solution by providing CBD education, advice and high quality products to create a CBD program that will meet your individual needs.

## Tinctures

Tinctures are an easy and semi-fast acting method of ingesting CBD. Simply apply a dropper full of tincture under your tongue and hold for 60-90 seconds then swallow. Tinctures can also be added to your favorite food or beverage.

For our carrier oil, we use the absolute purest and healthiest MCT oil in all of our tinctures. Not all MCT oils are created equal! We only use Ultra-Filtered Pharmaceutical Grade MCT Oil.

Bioavailability: 40 - 50%  
Onset: 15-30 minutes  
Duration: 2-4 hours

Pros: Convenient, discreet, fast acting and familiar

Cons: None

## Our CBD Sources

We buy our CBD directly from Organic US Grown Hemp farms in Colorado that have received 5-Star ratings from reliable CBD watchdog groups.

These organic farms provide us with third-party CBD testing results each time we place an order.

## Our Ingredients

We use ONLY the highest quality ingredients available on the current market. Period.

Our CBD products will not be outperformed!

## Sustainable Packaging

It is our responsibility, our promise and our commitment to future generations that we always provide the most sustainable ingredients, packaging and shipping materials we can find.

Find detailed information on each one of our CBD products at our website.

## Topical

Applying our CBD salve on your skin will provide targeted relief to a specific area. The skin absorbs CBD so that it can interact with cannabinoid receptors nearby. Useful for inflamed joints, muscle pain, arthritis, chronic pain and more.

Bioavailability: Insolates CB2 receptors around targeted area. Does not enter bloodstream.

Onset: 10-30 minutes  
Duration: 2-4 hours

Pros: Easy for targeting specific areas, bypasses liver, long lasting relief

Cons: Semi-inconvenient

## Read the label

Here is one of the most important points you can understand when shopping for CBD.

DO NOT simply judge the CBD potency in the bottle by the total milligrams of CBD on the label!

The bottle may read 500mg, but the important point is... How many servings are in the bottle?

Let's use tinctures for an example. A typical serving size is a 1ml dose. Tinctures are packaged in bottles of 15ml (15 servings), 30ml (30 servings) and 60ml (60 servings).

Total amount of CBD may read 500mg. But, the quantity of servings in the bottle will tell you how potent that product really is, *per serving*.

500mg of CBD in a 15ml bottle is twice as potent *per serving*, than the same size serving in a 30ml bottle. And, four times more potent than the same size serving in a 60ml bottle!

## Vape CBD e-Juice

Vaping, is an effective method of delivery and preferred by many because the body absorbs it almost instantaneously. A great option for anyone needing instant pain relief now instead of hours later.

Bioavailability: 40 - 70%  
Onset: Almost instantly  
Duration: 45min-1 hour

Pros: Easy to use, fun, social, relief with oral fixation and is also helpful for those who are trying to stop smoking cigarettes.

Cons: vaping is illegal in many public stores and restaurants

## Still have questions?

We love talking about CBD! We can be reached during daytime hours at 814-658-2142.

(read the label, continued)

## Total CBD vs. Total CBD per serving

500mg divided by 15ml = 33.3mg per serving

500mg divided by 30ml = 16.6mg per serving

500mg divided by 60ml = 8.33mg per serving

**This example shows how the milligram amount, per serving, will stay the same as the bottle gets bigger.**

500mg divided by 15ml = 33.3 per serving

1000mg divided by 30ml = 33.3mg per serv.

1500mg divided by 60ml = 33.3mg per serv.

Proper CBD product packaging should state these important CBD facts on the bottle. If not, now you know how to verify the actual potency of what you are buying.
